

BOM-to-Instruction Verification Matrix

PORTFOLIO SAMPLE - Fictional BOM created to demonstrate the accuracy-audit method requested in the LG&P; role.

Verification method

Cross-reference each BOM line against every place the component appears in the instruction sheet. Verify part number, description, quantity, image/callout label, assembly step, and revision impact before QA release.

BOM PN	Engineering description	BOM qty	Instruction ID	Used in step	Sheet qty	Result	Reviewer note
100-001	Base frame assembly	1	A	1	1	PASS	Description and quantity match
100-014-L	Upright panel - LH	1	B-L	2	1	PASS	Orientation called out
100-014-R	Upright panel - RH	1	B-R	2	1	PASS	Orientation called out
100-031	Shelf assembly	3	D	4	3	PASS	All three placements shown
900-620	M6 x 20 socket screw	12	H1	2,3,5	12	PASS	Count reconciled across steps
900-621	M6 flat washer	12	H2	2,3,5	12	PASS	One washer per screw
REV CHECK	Drawing revision C	-	Rev block	All	-	PASS	Instruction sheet updated to same release

Release gate

Do not release if any BOM line is missing, duplicated, mislabeled, uses a mismatched quantity, or is affected by an unreconciled engineering revision. Discrepancies are returned to Engineering/Project stakeholders for resolution before publication.
